

What's in the box: Zoom H2n, Power Supply, USB Lead , 16GB SD Card

The Zoom H2n is capable of recording very high quality audio in a range of stereo and surround polar patterns. You can control the recording pattern using the switch on the top of the unit. Here are the basic operation instructions:

1. Choose you audio pattern and turn on using the right side power switch
2. Choose a recording file format from Menu/ Rec/Rec Format (44.1 16 bit is CD quality, 48 is for content being added to separate video).
3. Set a mic Gain level with the toggle wheel (right) and check level on meters (We recommend a peak level of around -6)
4. Press Record to Start, Record again to stop. You can then preview your recording using play
5. Files can be copied off using the supplied USB Cable
